

APart MASK
SAFCAB6 safety cable

APart

SAFCAB6 is a safety cable for the APart MASK and SDQ speaker ranges. It is a plasticized steel cable with a clamped loop on one end and an eye-shaped screw on the other end. The loop clamp can be opened and closed with a normal Allen key.

The screw custom-fits the thread-point on the back of the speaker. The loop should be fixed to a screw in a wall or to a truss construction.

Even if local laws do not require the installation of a safety cable, its use is recommended for enhanced safety. APart speakers have been designed with installers' ease in mind! Therefore SAFFCAB6 is standard included with all MASK4/6 speakers, and available as an accessory for the SDQ-3 and 5 range.

TECHNICAL SPECIFICATIONS

Packaging : plastic bag. 2 cables per bag

Cable length : 40 cm incl. loop

Weight : 50 g
