

CPB110P

Cover bag for PX110

The CPB series are heavy duty splash waterproof speaker bags especially designed for the protection and handling of the AUDAC PX and RX speakers in all possible situations. The design ensures that it is possible to reach the connections, place the speaker on a stand and carry the speaker using the speaker handles even when the cover bag is attached. When not used, all these openings can be covered with a stitched flap from the same material. The front of the bag can be opened with a zipper to use the speaker without removing the bag. During transportation and storage, the front can be closed to avoid any damage to the speaker. The bags are made out of extra strong, water repelling polyester with heavy duty stitching and are finished with small rubber feet. The inside has a special soft coated protection to avoid structural damages.
