1.Product Description

1.1 Description

The network IP keyboard adopts the new design of PC + ABS outer case. It is light and easy to operate. The bottom is designed with a non-slip silicone pad that can be operated with one hand. The IP keyboard uses an industrial-grade 5-inch LCD screen. With Solution 1920 * 1080P H.264/265 stream, super wide viewing angle IP operation keyboard. Using import 4D joystick, stepless knob buttons, and silicone buttons with great operating feel. The buttons are fully functional, which effectively solves the inconvenience of the current web-page operation of the PTZ. The app earance is simple and beautiful; the display effect is excellent, and the image characters are delicate and clear. IP keyboard supports ONVIF protocol, compatible with 99% PTZ cameras on the market. Easy operation, only a few steps to achieve perfect control of PTZ Cameras.

1.2 Product Features

- (1) Support ONVIF protocol, with independent IP address in IP mode.
- (2) Equipped with stepless knob keys to adjust the control speed and zoom speed.

- (3) With Import variable-speed 4D joystick, feels good and comfortable. Twist the joystick to control the PTZ camera directly.
- (4) Support standard POE power supply.
- (5) The bottom is designed with non-slip silicone pad.

3. PTZ and Keyboard connection

3.1 Make sure the camera has open ONVIF protocol

(Take Hikvision camera as an example)

The screenshot shows the Hikvision web interface. The navigation path is: Configuration (2) > Network (2) > Advanced Configuration (2) > Integration Protocol (2). In the Integration Protocol section, the 'Enable ONVIF' checkbox is checked (3). A user account is added with the name 'admin' and type 'administrator' (4). Finally, the 'save' button is clicked (5).

Num...	user name	user type
1	admin	administrator

- (1) Input the IP address of the camera, enter the WEB interface.
- (2) Configuration---Network----Advanced Configuration----Integration Protocol
- (3) Tick and enable ONVIF protocol
- (4) Add an administrator account (the same as the account you use to activate the camera)
- (5) Save

3.2 ONVIF connection

- (1) Press <SEARCH> to the search device, move the red cursor to the right to jump into the search, press the middle button of the joystick to confirm the search for the device, select the device to be added, press OK, and then move the red cursor to New. Enter the camera user name and password to save (the camera and keyboard must be on the same network segment)

(3) The successfully added devices can be viewed in the device list and exit to the main interface. Press the CAM key + number keys + confirmation key to select the online device.

4. WEB Upgrade

4.1 System Upgrade

The keyboard and the computer are connected to the same local area network. Enter the keyboard IP address on the browser, then enter the keyboard upgrade page.

The upgrade function is used as the maintenance and update keyboard function. After entering the upgrade page, select the correct upgrade file and click "Start". The device will automatically restart after the upgrade is completed. Ps: Do not perform any operations on the device during the upgrade process, and do not power off or disconnect the network!

4.2 System reset

When the device cannot be used normally due to the modification of some configurations, the device can be restored to the factory value through system settings and factory reset. Use with caution when the device is working properly

4.3 System restart

After the device is used for a long time and needs to restart maintenance, click Restart to achieve the purpose of restarting maintenance

Before attempting to connect or operate this product,
Please read instructions card fully and save this manual for future use.
